Manoeuvring Assistant

Assess risk from real time information

Find your way through heavy traffic and complex berthing operations with NAVTOR's unique Manoeuvring Assistant module.

Manoeuvring Assistant utilises an array of real-time data – incorporating routes, sensor information, AIS targets and updated ENCs – to provide bridge teams with a powerful tool to assess situations and empower optimal manoeuvring in challenging environments. Safe, secure, seamless awareness for the most demanding operations.

Monitoring and docking

Manoeuvring you ahead

NAVTOR's Manoeuvring Assistant Module is a part of the maritime route planning tool NavStation®. It combines routes, sensor data and AIS targets with updated ENC's.

Tailored for usability, officers can access the module over any Windows PC or tablet, enabling them to move to key points around the bridge for full situational awareness. When a route can be monitored on ENC's, sensor and AIS data can be received over Wi-Fi.

In addition, the system can also be used for emergency navigation as a reliable "take me home" solution.

SAVE TIME AND COSTS

NavStation includes access to an array of digital navigational information incorporated additionally as overlays on top of official ENC charts. With databases and permits automatically distributed and updated seamlessly through our cyber-secure NavBox, NAVTOR continually ensures vessels have the data they need to keep them safe, compliant and always up to date.
